## COS20015 – FUNDAMENTALS OF DATA MANAGEMENT

Pass Task 1.1.5
To find the -n flag through the man grep function, the easiest way is to search the output by using the / key.

Below is a screenshot of the -n command being used to add a line number to the output.

The command used as grep -E "^(S[a-zA-Z]*,\s[^S^s][a-zA-Z]*)" People.txt -n > surname_output.txt
